The Infertility Handbook

Mar 14 2022 As you read this, one in six Australian couples trying to conceive are riding

the emotional rollercoaster of infertility, with a huge one in three couples predicted to be affected by infertility in the next ten years. These figures, however shocking, do not even begin to tell the story of heartbreak, loss, guilt and blame that each and every couple trying to conceive feels. Many couples, in their desperation, spend precious hours and hundreds, sometimes thousands, of dollars on fertility treatments, without knowing exactly how the treatments work, what the possible side-effects are and whether there is any scientific evidence to back them up. This was the author of The Infertility Handbook, Angela

Hutchin's experience during her six-year battle to conceive. Angela, in her passion to share the knowledge from her extensive research on infertility, has written a handbook for couples that provides all the information you could possibly need about fertility and falling pregnant. Angela has listed methods and products to help you identify when you are most fertile, detailed products that can adversely affect your fertility (including aspirin!), and outlined a number of medical and natural approaches to treating infertility. This is the one-stop book that deals with all sides of infertility, from the cause and treatments to the

emotional aspects of overcoming grief and loss. Ultimately Angela has written a book that has the perfect balance of science and facts and personal insight; Angela has managed to illuminate the minefield of infertility the way only someone who has battled infertility (and won) can.

[Infertility in History](#) Jan 12 2022 This ground-breaking, interdisciplinary volume provides an overdue assessment of how infertility has been understood, treated and experienced in different times and places. It brings together scholars from disciplines including history, literature, psychology, philosophy, and the social sciences to create the first large-scale review of recent research on the history of infertility. Through exploring an unparalleled range of chronological periods and geographical regions, it develops historical perspectives on an apparently transhistorical experience. It

shows how experiences of infertility, access to treatment, and medical perspectives on this 'condition' have been mediated by social, political, and cultural discourses. The handbook reflects on and interrogates different approaches to the history of infertility, including the potential of cross-disciplinary perspectives and the uses of different kinds of historical source material, and includes lists of research resources to aid teachers and researchers. It is an essential 'go-to' point for anyone interested in infertility and its history. Chapter 19 is open access under a CC BY 4.0 license via link.springer.com. [Oxford Handbook of](#)

Handbook of diet and nutrition in the menstrual cycle, periconception and fertility Jan 20 2020 The reproductive cycle in women is complex and can be considered to begin with epigenetic programming and ending with menopause. Intervening steps involve a variety of processes, including the cellular development of the sex organs, menarche, episodic endocrine cycles,

menstruation, ovulation and conception. These processes can be influenced by diet and nutrition and vice versa. Body composition has an impact on the menstrual cycle and periconception and these factors in turn also influence body composition. Similarly, either food deprivation, dietary excess or obesity can result in marked changes in the menstrual cycle with a concomitant effect on fertility. This handbook is the first scientific source that provides a comprehensive overview of the relationship of diet and nutrition with puberty, menarche and menstrual cycle, conception and fertility and infertility. The handbook of diet

and nutrition in the menstrual cycle, conception and fertility will benefit dieticians, nutritionists, gynaecologists, endocrinologists, obstetricians, paediatricians and those concerned with women's health in general.
