The Delton Silent Reading Test, Forms A and B, was developed as an alternate test for the Schonell Silent Reading Test which is currently used for screening the reading comprehension of special students. The aim of the Delton Silent Reading Test is to achieve greater consistency in mid-year and mid-program assessments for special students who were originally assessed with the Schonell Silent Reading Test. This study reports the development of the Delton Silent Reading Test and the validation process undertaken to determine the equivalence of content, readability levels, comprehension strategies, questioning strategies and student test scores on the Delton and Schonell tests. Results indicate that there is no significant difference between matched test items on the Delton and Schonell Silent Reading Tests for item content, readability levels and reading and questioning strategies. Results from correlations of student test scores indicated that test scores did not differ significantly. ($r=.93$,p "Silent Ischemia, Current Concepts and Management" contains the proceedings of a conference held in Rottach-Egern, West Germany, March 5 to 7, 1987. We are most grateful to the authors for the effort to provide manuscripts before the meeting, to the sponsor, Bayer AG, for their generous support and to the publishers for their efficient collaboration, all of which have made the appearance of this book possible. When discussing silent myocardial ischemia, the first question is: "why is it silent?". To approach this question, a deeper look has to be taken into the pathophysiology of cardiac pain and the excitatory and inhibitory mechanisms involved. It has to be borne in mind that - in contradiction to

what the poets have told us so beautifully for many centuries - the heart is a visceral and not a sensitive organ. If asymptomatic ischemia did not carry prognostic significance comparable to the symptomatic manifestations of ischemia, then the problem of silent ischemia would be very academic and without consequences for treatment. Therefore studies on prognosis of silent ischemia are of great importance, as their results should indicate how aggressively patients are to be managed.

Achievement-Reading. Do women participate in and influence meetings equally with men? Does gender shape how a meeting is run and whose voices are heard? The Silent Sex shows how the gender composition and rules of a deliberative body dramatically affect who speaks, how the group interacts, the kinds of issues the group takes up, whose voices prevail, and what the group ultimately decides. It argues that efforts to improve the representation of women will fall short unless they address institutional rules that impede women's voices. Using groundbreaking experimental research supplemented with analysis of school boards, Christopher Karpowitz and Tali Mendelberg demonstrate how the effects of rules depend on women's numbers, so that small numbers are not fatal with a consensus process, but consensus is not always beneficial when there are large numbers of women. Men and women enter deliberative settings facing different expectations about their influence and authority. Karpowitz and Mendelberg reveal how the wrong institutional rules can exacerbate women's deficit of authority while the right rules can close it, and, in the process, establish more cooperative norms of group behavior and more generous policies for the disadvantaged. Rules and numbers have far-reaching implications for the representation of women and their interests. Bringing clarity and insight to one of today's most contentious debates, The Silent Sex provides important new findings on ways to bring women's voices into the conversation on matters of common concern.

Commonly used low vision reading tests frequently feature very short passages, read aloud, without any test of comprehension. The goal of this study was to create and evaluate a new silent, naturalistic reading test that contains longer passages to more closely mimic common daily reading tasks. Twelve nonfiction passages were produced along with four accompanying comprehension questions each. Twenty-eight normally sighted subjects were recruited for a first evaluation of the passages and questions. The average (SD) passage reading speed was 268 (67) words per minute. Passage reading speed showed a significant correlation with MNRead reading accessibility index ($p = 0.05$). Six passages, with one question discarded each, were selected out of the twelve to comprise the final reading test. Sixteen subjects with low vision were recruited to evaluate these passages and questions. Each subject read six passages, aided by a handheld CCTV magnifier if needed. The mean passage reading speed was 140 (40) words per minute. Passage reading speed was significantly correlated with contrast sensitivity ($p < 0.05$)

False-Positive HIV Test Results By: Dr. Hugues Fidele Batsielilit, Ph.D

as a result of the findings and experiences of Dr. Hugues Fidele Batsielilit, Ph.D., during the implementation of infectious diseases programs in several African countries. Sadly, he observed there was consistent denial of existing evidence of false-positive HIV test results within African communities, particularly in areas of underprivileged populations living in remote areas. The writing of this book was further prompted by the disregard for the increasing impact false-positive results have on individuals and communities resulting in an overall failure in the confidence Africans have for battling the soaring negative impacts of HIV. The issue of false-positive HIV test results should not be restricted to only perceptive or conceptual fact and advice for conventional harmless procedures. Rather, it must be presented and focused upon as a persistent and challenging negative issue with need for urgent actions along with diverse approaches to mitigate it and the pervasive impact it has on Africans.
