Language: Communication and Human Behavior May 24 2020 In these newly edited, annotated, and contextualized foundational linguistic works, many previously unpublished, the late William Diver of Columbia University radically analyzes language as a structure shaped by communicative function and by characteristics of its human users.

Diseases of Poultry Oct 29 2020 Now in its Twelfth Edition, Diseases of Poultry continues its tradition of excellence as the definitive reference of poultry disease. Following the same user-friendly format, the

book has been thoroughly updated to reflect the most current knowledge of avian pathology, including new coverage of genetic resistance to disease. Coverage is given to both common and uncommon diseases, and chapters are organized by disease type, including viral, bacterial, fungal, parasitic diseases as well as others, such as nutritional, developmental, metabolic, noninfectious diseases and toxins. Each disease section provides detailed coverage of history, etiology, pathobiology, diagnosis, and intervention strategies, as well as the economic and public health significance of each disease. With a host of international authors, Diseases of Poultry is a must-have resource for all veterinary pathologists, practitioners, agricultural managers and industry leaders involved in poultry health and production.

Classification and Nomenclature of Viruses Mar 26 2023 The Fifth Report of the International Committee on Taxonomy of Viruses (ICTV), summarizes the proceedings and decisions reached by the ICTV at its meetings held at the International Congresses of Virology in Sendai (1984), Edmonton (1987) and Berlin (1990). This report has been organized in the same way as the previous ones (Wildy, 1971; Fenner, 1976; Matthews, 1979; 1982), yet it encompasses many more families and groups of viruses than previous reports, and it includes new tables, diagrams and keys. The officers and members of the ICTV study groups from 1984 to 1990 are listed, as the current ICTV statutes and rules of nomenclature. Information

on the format for submission of new taxonomic proposals to the ICTV is also provided. Since the Fourth Report of the ICTV (1982), 19 new virus families and groups have been described. This report includes 2,430 viruses belonging to 73 families or groups, as well as virus satellites and viroids descriptions, but it does not include descriptions not approved by the ICTV. It now will be possible to publish such preliminary, and in some cases controversial, descriptions in the Virology Division pages of the Archives of Virology --this will allow virologists to carry on the kind of interim dialogue that is necessary for arriving at broad agreement on taxonomic matters.

UAS Detection Classification and Neutralization Apr 27 2023 The purpose of this document is to briefly frame the challenges of detecting low, slow, and small (LSS) unmanned aerial systems (UAS). The conclusion drawn from internal discussions and external reports is the following; detection of LSS UAS is a challenging problem that can- not be achieved with a single detection modality for all potential targets.

Classification of LSS UAS, especially classification in the presence of background clutter (e.g., urban environment) or other non-threatening targets (e.g., birds), is under-explored. Though information of available technologies is sparse, many of the existing

options for UAS detection appear to be in their infancy (when compared to more established ground-based air defense systems for larger and/or faster threats).

Companies currently providing or developing technologies to combat the UAS safety and security problem are certainly worth investigating, however, no company has provided the statistical evidence necessary to support robust detection, identification, and/or neutralization of LSS UAS targets. The results of a market survey are included that highlights potential commercial entities that could contribute some technology that assists in the detection, classification, and neutralization of a LSS UAS. This survey found no clear and obvious commercial solution, though recommendations are given for further investigation of several potential systems.

Viral Gastroenteritis Mar 22 2020 Recently, rapid developments have occurred in the field of viral gastroenteritis. This book is an update of fundamental and practical aspects of viral gastroenteritis. Among the various agents that cause viral gastroenteritis, group A rotaviruses and caliciviruses are the focus of this volume because of their clinical impact and the significance of new findings about them.

The Diachrony of Classification Systems Jun 05 2021 Classification is a popular topic in typological, descriptive and theoretical linguistics. This volume is the first to deal specifically with the diachrony of linguistic systems of classification. It comprises original papers that examine the ways in which linguistic classification systems arise, change, and dissipate in both natural circumstances and in circumstances of attrition. The role of diffusion in such processes is explored, as well as the question of what can be diffused. The volume is not restricted to nominal systems of classification, but also includes papers dealing with the less well-known phenomenon of verbal classification. Languages from a wide spread of world regions are examined, including Africa, Amazonia, Australia, Eurasia, Oceania, and Mesoamerica. The volume will be of interest to linguistic typologists, descriptive linguists, historical linguists, and grammaticalization theorists.

Oceanography and Mine Warfare Feb 19 2020

Environmental information is important for successful planning and execution of naval operations. A thorough understanding of environmental variability greatly increases the likelihood of mission success. To ensure that naval forces have the most up-to-date capabilities, the Office of Naval Research (ONR) has an extensive environmental research program. This research, to be of greatest use to the warfighter, needs to be directed towards assisting and solving battlefield problems. To increase research community understanding of the operational demands placed on naval operators and to facilitate discussion between these two groups, the National Research Council's (NRC) Ocean Studies Board (OSB), working with ONR and the Office of the Oceanographer of the Navy, convened five previous symposia on tactical oceanography. Oceanography and Mine Warfare examines the following issues: (1) how environmental data are used in current mine warfare doctrine, (2) current procedures for in situ collection of data, (3) the present capabilities of the Navy's oceanographic community to provide supporting information for mine warfare operations, and (4) the ability of oceanographic research and technology developments to enhance current mine warfare capabilities. This report primarily concentrates on the importance of

oceanographic data for mine countermeasures.

The Herpesviruses Oct 21 2022 The Herpesviruses provides information pertinent to all the herpesviruses, with emphasis on the classification, morphology, replication, physical-chemical properties, and immunological relationships of all the herpesviruses. This book presents the fundamental and clinical aspects of the viruses. Organized into 21

chapters, this book starts with an overview of the classification of the herpesvirus and proceeds to explore the origins and phylogeny of the herpesviruses. This text then examines the earliest electron microscopic studies on the morphology of the herpesviruses by using shadowcast preparations of herpes simplex virus and of herpes zoster virus. Other chapters consider the serological tests as well as the antigenic relationships among herpesviruses. The final chapter deals with the clinical application of antiviral drug treatment. This book is a valuable resource for virologists, molecular biologists, veterinarians, physicians, as well as teachers and graduate students who are interested in the herpesviruses from either a fundamental or clinical viewpoint.

The Systematic Identification of Organic Compounds

Apr 22 2020 The Systematic Identification of Organic Compounds A comprehensive introduction to the identification of unknown organic compounds

Identifying unknown compounds is one of the most important parts of the study of chemistry. From basic characteristics such as melting and/or boiling point to more complex data generated through cutting-edge techniques, the range of possible methods for identifying unknown organic compounds is substantial. The utility of a research reference which compiles known techniques and characteristics of possible compounds is clear. The Systematic Identification of Organic Compounds provides such a reference, designed to teach a hands-on approach in the chemistry lab. It takes readers step-by-step through the process of identifying an unknown compound and elucidating its structure from infrared, nuclear magnetic resonance, and mass spectra in addition to solubility characteristics, melting point, boiling point, and classification tests. The result is an essential overview for advanced chemistry students looking to understand this exciting area of laboratory work. Readers of the ninth edition of The Systematic Identification of Organic Compounds will also find: A detailed chapter on safety, personal protection equipment, chemical storage, safety data sheets, and other safety concerns New NMR, IR, and mass spectra with detailed explanations on interpretation Questions at the end of each chapter designed to facilitate and reinforce progression, keyed to a companion website

for instructors Tables of known compounds including data relevant for identification Companion website with structural problems from experimental data for students to practice how to reason and solve The Systematic Identification of Organic Compounds is a useful reference for advanced undergraduates and graduate students studying organic chemistry, organic spectroscopy, and related subjects.

FORCENet Implementation Strategy Sep 20 2022 FORCENet is currently defined as the operational construct and architectural framework for naval warfare in the information age that integrates warriors, sensors, networks, command and control, platforms, and weapons into a networked, distributed, combat force that is scalable across all levels of conflict from seabed to space and sea to land. Although this definition views FORCENet as the operational construct and the architectural framework for the entire transformed Navy, some have viewed FORCENet merely as an information network and the associated FORCENet architecture merely as an information systems architecture. FORCENet Implementation Strategy provides advice regarding both the adequacy of this definition and the actions required to implement FORCENet.
